

STUDY PLAN

My own country, Timor-Leste, is a developing country that is now building up its human resource base in various fields, including engineering, economics, management, etc., as these are constantly needed for national development. As a Timorese, accounting is what I would like to study in my study plan. I decided to study accounting because I think it is important and useful for me to apply it in every economic sector in every type of organization, both government organizations and private organizations such as business organizations, etc., in Timor-Leste when handling financial concerns. Meanwhile, accounting will not only be beneficial for my professional career but will also provide useful knowledge for managing my personal finances, such as how to create an effective personal budget, manage my savings wisely, and make informed financial decisions. To gain such knowledge, I need to study deeply about accounting, both theoretically and practically. In order to achieve this goal, I believe that it would be best to continue my studies in a developed nation like China. I decided to study in China because it is one of the largest and richest countries in the world and has extensive expertise in all areas of scientific and economic development.
